

SYMBIOSIS INSTITUTE OF TECHNOLOGY, PUNE

Constituent of Symbiosis International (Deemed University), Pune

Name: Devansh Singh
PRN: 25070122072
Batch: A-2
Division: A

Subject: Programming with Java

ASSIGNMENT No : 29

TITLE : Write a JSP application to demonstrate the basic concepts of Java Server Pages.

Problem Statement

Write a JSP application to demonstrate the basic concepts of Java Server Pages.

Learning Objectives

To develop dynamic web pages using Java Server Pages.

Theory

Java Server Pages (JSP) is a server-side technology used for developing dynamic web applications.

JSP allows Java code to be embedded within HTML pages using special JSP tags. When a JSP page is requested, the web server automatically translates it into a servlet, compiles it, and executes it to generate dynamic web content.

JSP supports implicit objects, directives, scripting elements, expression language, and standard tag libraries. It simplifies web development by separating presentation from business logic. JSP is commonly used with Servlets and JDBC for building database-driven web applications.

Output Screenshots

Java Server Pages Demo

Welcome, Devansh!

This page is generated using JSP.

CODE

```
1 <!DOCTYPE html>
2 <html>
3 <head>
4     <title>JSP Demo</title>
5 </head>
6 <body>
7
8 <h2>Java Server Pages Demo</h2>
9
10 <%
11     String name = "Devansh";
12 %>
13
14 <p>Welcome, <%= name %>!</p>
15
16 <p>This page is generated using JSP.</p>
17
18 </body>
19 </html>
```

EXERCISE 1

```
1 <!DOCTYPE html>
2 <html>
3 <head>
4     <title>Student Information</title>
5 </head>
6 <body>
7
8 <h2>Student Information</h2>
9
10 <form method="post">
11
12     Name:
13     <input type="text" name="name">
14     <br><br>
15
16     Roll No:
17     <input type="text" name="roll">
18     <br><br>
19
20     Course:
21     <input type="text" name="course">
22     <br><br>
23
24     <input type="submit" value="Submit">
25
26 </form>
27
28 <%
29     String name = request.getParameter("name");
30     String roll = request.getParameter("roll");
31     String course = request.getParameter("course");
32
33     if (name != null && roll != null && course != null) {
34 %>
35
36 <h3>Student Details</h3>
37
38 <p>Name: <%= name %></p>
39 <p>Roll No: <%= roll %></p>
40 <p>Course: <%= course %></p>
41
42 <%
43     }
```

```
44 %>
45
46 </body>
47 </html>
```

EXERCISE 2

```
1 <!DOCTYPE html>
2 <html>
3 <head>
4   <title>User Registration</title>
5 </head>
6 <body>
7
8 <h2>User Registration</h2>
9
10 <form action="result.jsp" method="post">
11
12   Name:
13   <input type="text" name="name">
14   <br><br>
15
16   Email:
17   <input type="email" name="email">
18   <br><br>
19
20   Phone Number:
21   <input type="text" name="phone">
22   <br><br>
23
24   Password:
25   <input type="password" name="password">
26   <br><br>
27
28   <input type="submit" value="Register">
29
30 </form>
31
32 </body>
33 </html>
```

RESULT CODE

```
1 <!DOCTYPE html>
2 <html>
3 <head>
4     <title>Registration Result</title>
5 </head>
6 <body>
7
8 <h2>Registration Details</h2>
9
10 <%
11     String name = request.getParameter("name");
12     String email = request.getParameter("email");
13     String phone = request.getParameter("phone");
14     String password = request.getParameter("password");
15 %>
16
17 <p>Name: <%= name %></p>
18 <p>Email: <%= email %></p>
19 <p>Phone Number: <%= phone %></p>
20 <p>Password: <%= password %></p>
21
22 </body>
23 </html>
```

Exercise

Q1. Create a JSP page to display student information entered by the user.

Student Information

Name:

Roll No:

Course:

Student Details

Name: Devansh

Roll No: 25070122072

Course: CSE

Q2. Create a JSP application that takes user registration details such as Name, Email, Phone Number, and Password, and displays the submitted information on a result JSP page.

Registration Details

Name: Devansh

Email: devanshsingh3107@gmail.com

Phone Number: 8888888888

Password: password

Conclusion

Thus, the experiment successfully demonstrated the basic concepts of Java Server Pages (JSP) for developing dynamic web applications. JSP allows Java code to be integrated with HTML and dynamically generates web content. The experiment provided an understanding of JSP tags, scripting elements, implicit objects, and its use with Servlets and JDBC.
